

Smart Hospital System

Project Name: Smart Hospital Management System.

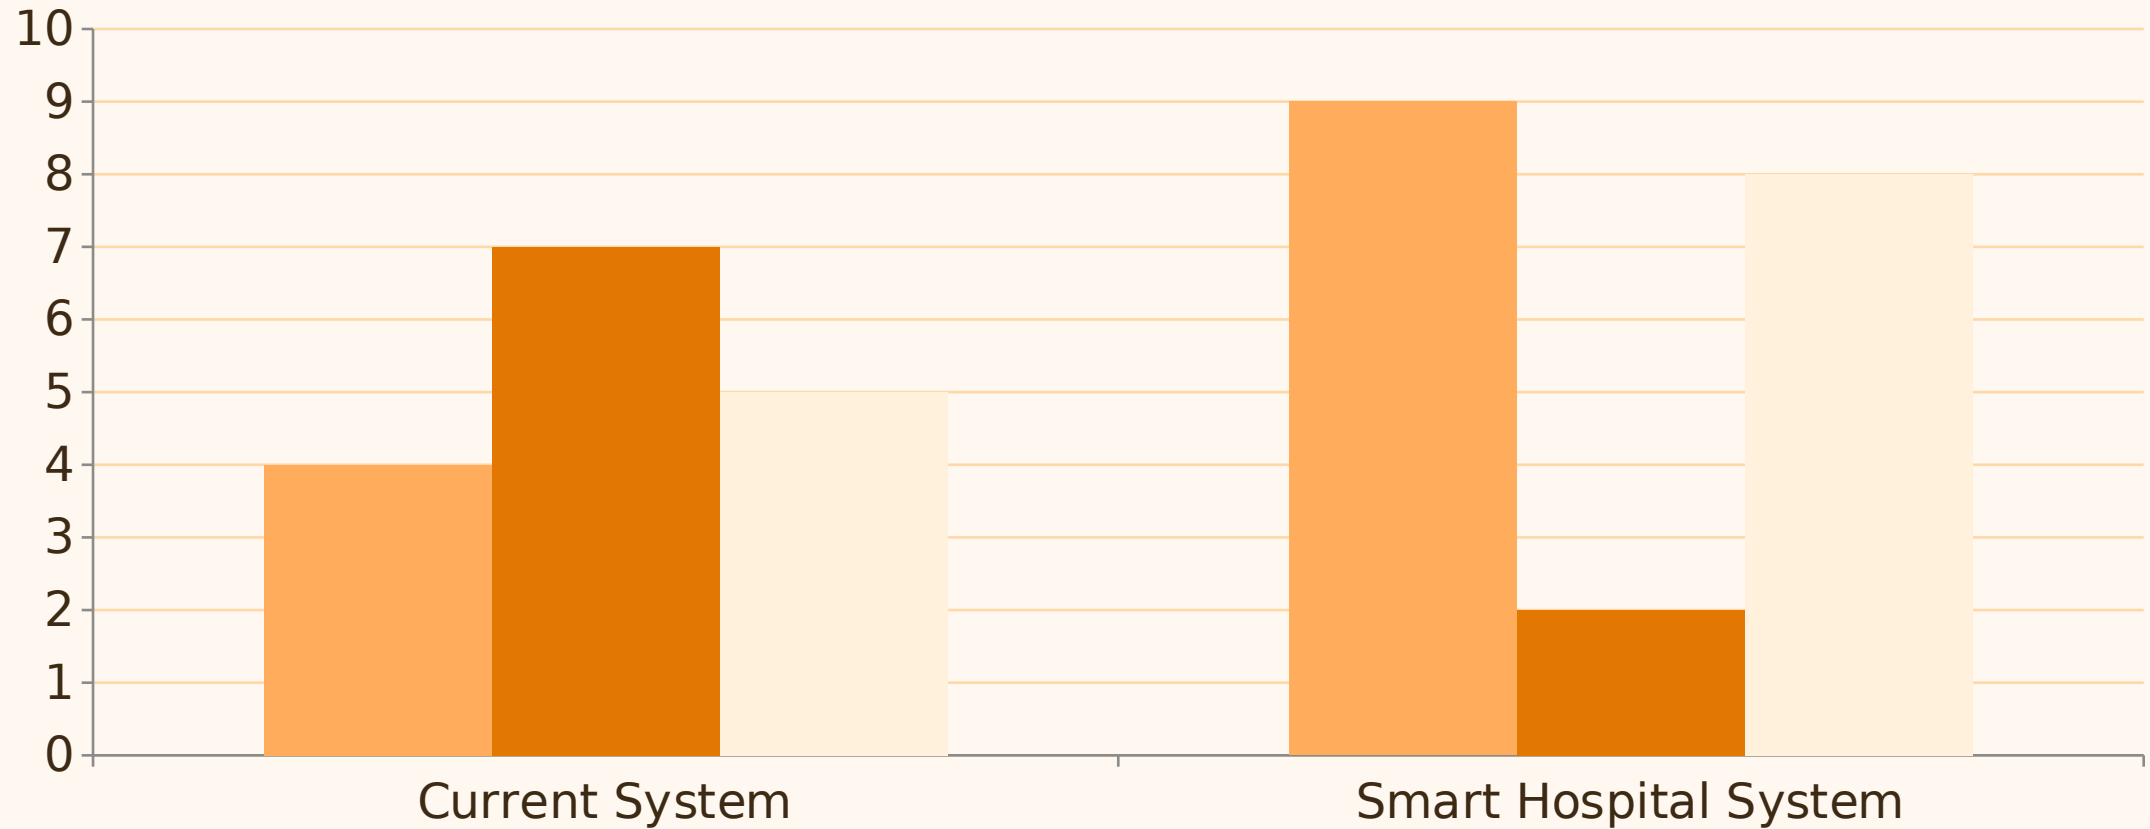

A modern solution for efficient hospital operations.

Why This System?

System Performance Comparison

■ Efficiency ■ Error Rate ■ Patient Satisfaction

Main Goals & Features

- Centralized data for patients and doctors.
- Intuitive appointment scheduling.
- Robust data management functions.
- Improve staff productivity and patient care.

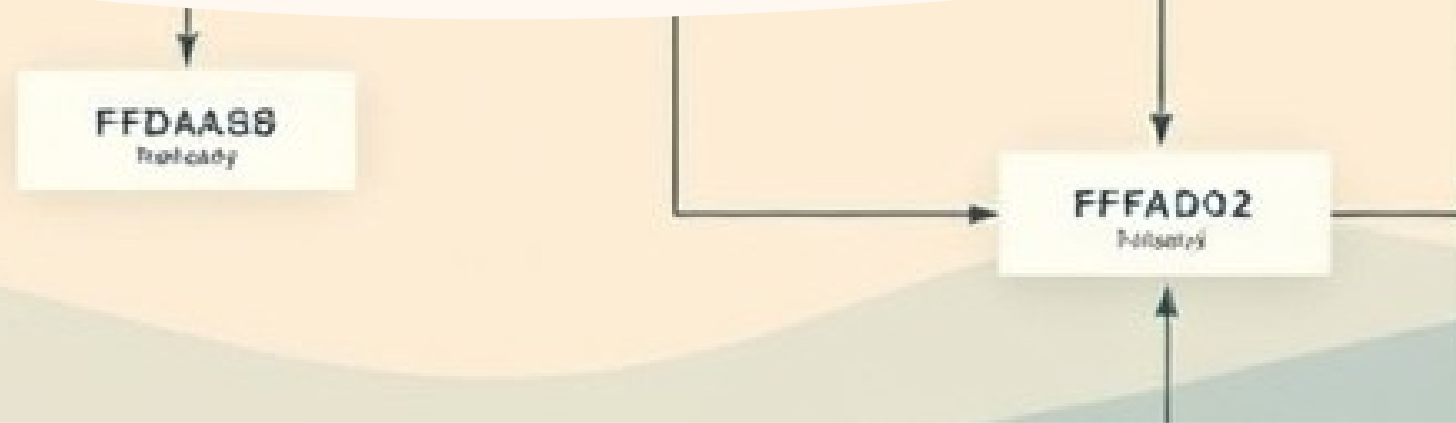

Core System Design

`Person` Base Class: `name`, `ID`, `contactInfo`.

Inheritance: `Patient` and `Doctor` inherit from `Person`.

`Patient`: `medicalHistory`, `appointments`.

`Doctor`: `specialization`, `availability`.

Data Structure Power

Doubly Linked List: Efficient patient/doctor management.

Binary Search Tree (BST): Fast appointment lookup/scheduling.

Queue: Streamlined appointment scheduling and processing.

System Functionality

Manage Users: Add, remove, find, update patients/doctors.

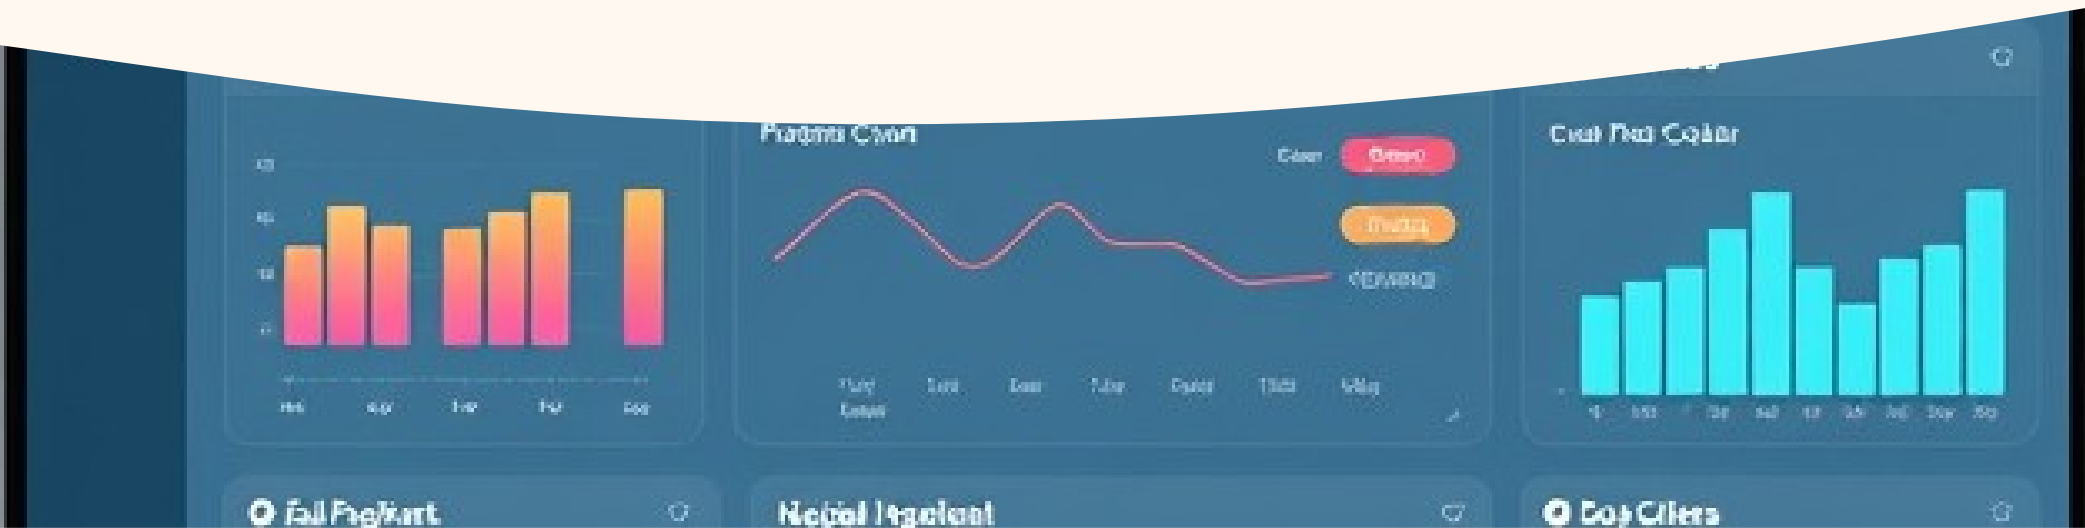

Appointments: Schedule, reschedule, cancel.

Smart Actions: Redo, undo, delete records.

Comprehensive and secure data handling.

Intuitive User Interface

User-friendly and clear interface design.
Visual feedback for all operations.
Minimizes user error, enhances efficiency.
Accessible to diverse hospital staff roles.

Summary & Future

Enhanced efficiency through OOP and robust data structures.
Scalable and maintainable design.
Ready for future extensions like billing, inventory.
Revolutionizing hospital operations.
